This map represents HAB advisories issued by KDHE. Kansas public lakes are NOT monitored routinely for HABs; but rather as part of a complaint-based response program. Due to the COVID-19 pandemic during the 2020 season, water samples were collected only rarely. Instead, reports and photos submitted by Lake Managers or other experts were used to make consistent determinations of lake status. This map represents historical data and does not indicate current health of the lake. The normal HAB response season is April 1-Oct 31, though advisories sometimes remain active into November. Data current as of 12/31/2020. Source: KDHE Bureau of Environmental Field Services.
